BEYOND COST SAVINGS

8 reasons teams build their own internal tools

Buying and building are both valid. Here's what building can add beyond savings.

1–4

BEYOND COST SAVINGS

1 Off-the-shelf software doesn't always fit.

Some workflows have no good tool, so they run on manual steps and spreadsheets. Other teams pay full price and use only a fraction of it.

2 The numbers end up in one place.

Data spread across systems and spreadsheets can come together in one live view. One place makes it easier to layer insights and alerts on top of the data.

3 An audit trail can be built in.

Records can trace back to their sources, with timestamps.

4 Fewer manual errors.

Built-in validation can flag issues early, such as miscoded time or totals that don't match subtotals.

5–8

BEYOND COST SAVINGS

5 You can change it when the business changes.

Improvements don't have to wait on someone else's product roadmap. Small improvements can go live in days, not quarters.

6 Live numbers support faster decisions.

Reporting can move closer to real time.

7 People may be more likely to use it.

A tool built around how a team works can be easier to adopt.

8 It can fill gaps around the software you already use.

Custom tools can sit alongside existing systems, rather than replacing them.

BEYOND COST SAVINGS

8 reasons teams build their own internal tools

1. Off-the-shelf software doesn't always fit.
2. The numbers end up in one place.
3. An audit trail can be built in.
4. Fewer manual errors.
5. You can change it when the business changes.
6. Live numbers support faster decisions.
7. People may be more likely to use it.
8. It can fill gaps around the software you already use.
